

BONOLO MOHLAKOANE

067 486 0705 | bonolojeanet267@gmail.com | Gauteng, South Africa

PROFESSIONAL SUMMARY

ISTQB® Certified QA professional with hands-on experience in test automation, API testing, mobile testing, and database validation. Background in Financial Information Systems with strong SQL skills and exposure to full SDLC/STLC methodologies. Skilled in Agile environments with a track record of building scalable, maintainable frameworks and collaborating across development and business teams to deliver quality software. Proven ability to manage multiple tasks, identify process improvements, and communicate technical findings clearly to stakeholders at all levels.

TECHNICAL SKILLS

Testing & QA: Manual Testing, Test Case Development & Estimation, Functional, Regression & Negative Testing, Defect Logging & Retesting, Static Documentation Review, Peer Review

Automation: Selenium WebDriver, Playwright (Java & TypeScript), Appium, Karate Framework, TestNG, Maven

API Testing: REST API Testing, Karate, API Validation, LambdaTest, BrowserStack

SDLC/STLC & Methodologies: Agile, Waterfall, RAD, Spiral Model, full product development life-cycle

Databases: SQL, MySQL, relational database concepts

Communication & Soft Skills: Strong verbal and written communication, stakeholder liaison, knowledge transfer, consultative skills, self-motivated, ability to work independently or in a team, adaptable to changing environments

Other: Git, GitHub Actions, Java, Microsoft Excel, Agile fundamentals

INTERNSHIP EXPERIENCE

Software Testing Intern | Dial Testing Lab (DTL) | Aug 2025

- Designed and executed manual test cases, test scenarios, and RTM (Requirements Traceability Matrix) for web applications; documented in a dedicated manual testing portfolio
- Performed functional, regression, smoke, and exploratory testing; validated expected vs actual results and reported defects using JIRA-style reporting
- Gained practical knowledge of QA processes and defect lifecycle management
- Hands-on web application testing using Playwright for automated UI testing
- Cross-browser and cloud testing using LambdaTest to validate application behaviour across different browsers and environments
- Performed API testing using REST methods (GET, POST, PUT, PATCH, DELETE)
- Automated REST API calls for user registration and management using Karate Framework; validated API responses and data integrity
- Mobile application testing including functional validation and API-level testing for Android apps using Appium; identified and reported defects with clear reproduction steps
- Performed performance testing using Gatling to simulate load scenarios and assess application behaviour under stress
- Banking Automation Framework (ParaBank): Designed and implemented a hybrid test automation framework for a banking web application to simulate real-world financial system testing, covering UI automation (Playwright/Karate hybrid, POM) and API testing using Karate DSL within a Maven-based Java framework; implemented database validation using SQL, integrated TestRail reporting, and executed regression tests with parallel execution

RELEVANT PROJECTS

Full code, documentation, and test reports available on GitHub: github.com/bonolojeanet267-code/Karate_automation

Banking Automation Framework (ParaBank – End-to-End QA Project) — Java | Karate DSL | Playwright | TestNG | Maven | JUnit 5 | MySQL | TestRail | Git

- Designed and implemented a hybrid test automation framework for a banking web application (ParaBank) to simulate real-world financial system testing
- Developed automated UI test scripts for core banking workflows including user login and authentication, fund transfers between accounts, and account creation and loan request functionality
- Built API automation tests using Karate DSL for validating banking services and data integrity
- Implemented database validation using SQL to verify account and transaction data
- Designed a scalable test framework using Maven and JUnit 5 for structured test execution
- Integrated TestRail reporting to track test execution results and test coverage
- Executed regression testing suite with parallel execution for improved performance

- Applied Page Object Model (POM) principles for maintainable UI automation (Playwright/Karate hybrid approach)
- Performed negative and positive testing to validate system reliability and error handling

E-Commerce End-to-End Automation Framework — Karate · Playwright (Java) · MySQL · Maven · Git

- Designed a full end-to-end framework covering API user creation, UI workflow testing, and backend database validation
- Automated REST API calls (user registration/management) with Karate; built UI scripts with Playwright covering login, cart, and checkout
- Validated order data and transaction integrity against MySQL; ensured consistency across API, UI, and database layers

Selenium WebDriver Automation Framework — Java · Selenium · TestNG · Maven · Git

- Built from scratch using Page Object Model (POM), OOP principles, and optimised XPath locators
- Executed functional, regression, and negative test scenarios; managed test runs with TestNG
- Delivered a scalable framework ready for CI/CD integration with repeatable test coverage

EDUCATION

Diploma in Financial Information Systems | Walter Sisulu University, 2022–2024

- SQL Project: Designed a relational Airport Management System database with flights, passengers, and bookings; applied MySQL for data retrieval, filtering, and reporting

CERTIFICATIONS

- ISTQB® Certified Tester – Foundation Level (CTFL) | iSQI, 2025
- ISO/IEC 27001:2022 Lead Auditor | Mastermind Assurance, 2025
